

## **Clarke Energy Celebrates a Successful 10 Years in Australia and New Zealand**

This month marks the 10-year anniversary of Clarke Energy's activities in Australia and New Zealand.

In that time Clarke Energy Australia and New Zealand have expanded exponentially and now employ over 60 dedicated staff to oversee all aspects of engine sales enquiry to turnkey projects, through to the operation and maintenance of sites. Australia and New Zealand currently home a combined installed base of over 150 GE Jenbacher engines generating almost 300MW of electricity.

The success of the company is epitomised by its continued success in the coal mine and coal seam methane market, establishing itself as the market leader in Australia. Unbeatable knowledge and expertise in this field led to a record order for a 45MW power plant installed in Queensland – the largest installation undertaken in Clarke Energy history, worldwide. This of course is augmented by the market share currently held in the renewable sector, notably biogas, landfill gas and natural gas applications.

Commenting on the 10 year achievement, Jim Clarke, CEO of Clarke Energy, said: "We have a team to be proud of down there and my thanks and congratulations go to each one for their effort, energy and loyalty without which our story would be very different".
