

COAL MINE METHANE POWER LAUNCHES CLARKE ENERGY CHINA

Clarke Energy's continued success and worldwide growth has been further enhanced with the recent signing of two coal mine methane powered turnkey projects to be constructed in the Sichuan and Shanxi Provinces. These two turnkey projects are the first order for Clarke Energy China and the very first commercial projects to be developed by both mine owners and carbon fund investors. Both projects have been secured within 6 months of Clarke Energy establishing their Beijing Office and will include design, installation and commissioning.

Clarke Energy China Ltd will continue the successful relationship already established with GE Energy Jenbacher by becoming strategic partners for its gas engine range to tackle the gas to power market in China – primarily focussing on coal mine and coal bed methane, biogas and landfill gas, along with other similar applications.

With an impressive record worldwide, Clarke Energy are able to bring the certainty of delivery, certainty to operate and certainty to provide technical support to its clients in China. Clarke Energy China is committed to providing a practical solution to address the safety, environmental, energy and social issues, which China's power industry is facing from all of its energy resources.
