CLARKE COMPELTE MAJOR DIESEL ENGINE OVERHAUL

Leading engine specialist, Clarke Energy has completed one of its largest ever engine refurbishment projects, the overhaul and re-commissioning of two massive 125 tonne, 3MW units. The two GEC Ruston engines were recently shipped to France for use in a new special gas application, following a project over several weeks involving the engines being dismantled, converted and completely rebuilt at Clarke Energy's 70,000 sq. ft. facility in Birkenhead.

Transportation of the engines was a major logistical operation which involved the famous 'Mersey Mammoth' floating crane hoisting the engines on to a ship within the wet basin site of Cammell Laird in Birkenhead. Clarke Energy Ltd awarded the site to site logistics contract to local project management and forwarding company, John S. Braid & Co. Ltd.

Clarke Energy, which has its head office in Knowsley, is one of the UK's foremost suppliers of gas-powered generators. Over the past ten years its world wide activities have helped it to steadily develop its engine customer contacts and it now holds the largest inventory of parts for the Ruston engines outside of the manufacturer's own facility.

Service Director, Alan Fletcher commented, "Our refurbishment division has developed an unrivalled reputation for parts, service and repair amongst engine users in the UK and around the world. Even so, these latest units are by far the largest engines Clarke Energy has converted to run on highly volatile gases, and their completion and shipment to France represents a landmark achievement for our Birkenhead facility."

Note:-

Clarke Energy Limited is a leading worldwide Energy Systems Company offering a wide range of green power generation solutions with offices in Australia, France, India, Nigeria, New Zealand and UK. Clarke Energy employs over 150 people worldwide and operates as part of the Clarke Group.
